DRAINAGE COMPLIANCE REPORT

INSTRUCTIONS AND USE

Drainage compliance clearance for building permit(s):

Section I Drainage Compliance Report must be completed by the developer, contractor/permit holder prior to final building inspection. This section is used to certify on-site finish grading conforms to approved plans, and all drainage features (i.e. earthen swales, etc) are constructed and conform to approved plans. A section I certification is mainly utilized for simple on-site lot surface drainage, such as Type "A" drainage. This section may be used for commercial and residential permits.

When more complex drainage feature(s) and/or facility(s) is/are proposed by the approved plans, a Section II Drainage Compliance Report may be required in addition to a Section I.

Section II Drainage Compliance Report must be completed by an **Engineer** prior to final building inspection, when required by the building official. This section is used to certify flood protection **features** (i.e. humped driveway, etc) and **facilities** (i.e. storm drains, drop inlets, etc) when required by approved plans. The **Engineer** is attesting that he/she has verified that all **features** and **facilities** have been constructed in conformance with approved plans. A Section II Drainage Compliance report must accompany a Section I Drainage Compliance Report.

A single Section I and/or Section II certification form may certify multiple Building Permits, or lots with the utilization of "Attachment A." "Attachment A" must include all pertinent Building Permit Numbers, and addresses. "Attachment A" must be signed and sealed by an Engineer when utilized in conjunction with Section II.

Drainage compliance clearance for grading permit(s):

When required by the Building Official, a **Section II Drainage Compliance Report** must be completed by an **Engineer** prior to final inspection of grading permit(s). By signing and sealing a section II Drainage Compliance report, the **Engineer** is attesting that he/she has verified that all **features** and **facilities** have been constructed in conformance with approved plans. A Section II must be completed prior to any pad grading inspections for subsequent building permits. The section II Drainage Compliance report will address drainage **facilities**, **features** and improvements required for flood protection prior to vertical construction as listed on approved plan(s). Subsequent building permits will be held at pad grading inspection until section II requirements are met. A single Section II certification form may certify multiple permits, or lots with the utilization of "Attachment A". "Attachment A" must include all pertinent Building Permit Numbers, and addresses. "Attachment A" must be signed and sealed by an Engineer.

DEFINITIONS

Engineer: A Nevada Registered Civil Engineer

Features: Non structural, surface drainage elements such as items in a drainage easements, sidewalk drains, earthen swales, humped driveways, berms, gutters, etc.

Facilities: Engineered drainage improvements and/or structures. Typical engineered drainage facilities include channels, box culverts, arch culverts, drop inlets, storm drains, rip-rap and/or armoring of drainage facilities, etc.

Regional: Drainage Facilities depicted in the latest Clark County Regional Flood Control District Master Plan.
